How I built jameschugh.com with Claude: the main prompts

One interactive portfolio page, built in a long conversation. These are the prompts that shaped it, condensed and in the order they came.

Standing rules, said once and kept in force: real facts only · phone-friendly with a 16px side gutter · light and dark mode · buttons are plain neutral glass, Resume stays filled · on phone, taps and buttons instead of scroll-scrubbing · after every change: commit, push, republish, redeploy.

1 · THE IDEA

"A portfolio that feels like a painted valley of the places I've worked. Scroll flies you through it, my story draws itself, then a journey map, then case studies."

2 · THE JOURNEY MAP

"One stop per chapter, with real photos and a short story. Fix the glitch and lag on the map, and on phone make it stop crashing."

3 · CASE STUDIES

"Open each one from the box. Big one-line headings, real logos, results shown as before and after, and a Coming Soon page for the unfinished ones."

4 · PHONE FIRST

"Replace carousels with taps and buttons. Keep every screen fully visible, with room for the words around it."

5 · A FUN HERO PER PROJECT

"MakeMyTrip: a big phone asks what you need. Tap one, the others step aside, the bell rings, the bellboy brings it."

6 · RESULTS AS WINDOWS

"Make the result cards like hotel windows, vertical, three on top and two below."

7 · PHONE HOME PAGE

"Instead of fixing the wide image, ask Canva for a portrait version of the painting with more sky and clouds at the top."

8 · REAL PHOTOS

"Convert these to WebP and add them to the right stop, with a short true caption."

9 · BOOKING

"Before Calendly, ask company, designation and what service they want. Make clear it's about their website or brand, not a learning call."

10 · OWN ADDRESSES

"Every case study gets its own link, tab title and preview card, not just jameschugh.com."

Tools: Claude Code (cloud) · Vercel (hosting) · Canva (portrait hero) · GitHub · Claude Artifacts (preview) · Playwright (testing) · Python image tools

Tip: give the rules first, then one visual idea at a time, then ask for a screenshot check at phone size and night mode.

Prompts are condensed from the conversation, not word for word.
